Product-Specific Risks
You are exposed to Equities Risk

- The value of stocks may fluctuate, sometimes dramatically, in response to the activities and results of individual companies or because of general market and economic conditions or other events.

You are exposed to QFII Risks

- The Underlying Fund may invest in China A shares and may incur losses due to limited investment opportunities, or may not be able to fully implement or pursue its investment objectives or strategy, due to QFII investment restrictions, illiquidity of the China A shares market, and/or delay or disruption in execution of trades or in settlement of trades.

You are exposed to Emerging Markets Risks

- The Underlying Fund invests in emerging market securities and the price of these securities may be more volatile than securities in more developed markets due to political and economic factors. This volatility may be exacerbated by legal, trading liquidity, settlement, transfer of securities and currency factors.

You are exposed to Emerging Markets (Russia only) Risk

- The Underlying Fund invests in Russia and it is understood that under current Luxembourg regulations, the Underlying Fund may invest not more than 10% of its net assets in unlisted securities not dealt on a regulated market. Some investments in Russian securities may be considered as falling within such limit.
- The Russian market presents specific risks in relation to the settlement and safekeeping of securities as well as the registration of assets where registrars are not always subject to effective government or other supervision.

You are exposed to Derivatives Risk

- The use of financial derivative instruments may give rise to leverage, liquidity, counterparty and valuations risks at times. In adverse situations, the Underlying Fund's use of derivative instruments may become ineffective and the Underlying Fund may suffer significant losses.

You are exposed to risks associated with Stock Connect

- The Underlying Fund may invest in certain China A shares through Stock Connect. The ability to trade through Stock Connect in a timely manner may be affected by quota limitations and PRC regulatory restrictions. A suspension in trading through Stock Connect will adversely affect the ability to access the PRC market. Differences in trading days in the PRC and Hong Kong markets also lead to the risks of price fluctuations in the shares when Stock Connect is not trading.
- Trading through Stock Connect is subject to other risks, including clearing and settlement risks (e.g. if the PRC clearing house defaults on its obligation, the Underlying Fund may suffer delays and/or inability to recover losses), restrictions on selling imposed by front-end monitoring, nominee arrangements in holding China A shares and regulatory risk.
