The team seeks to capitalize on powerful themes that may drive profits across these industries, and holdings are diversified across multiple industry segments to maximize thematic opportunities. The Underlying Fund invests in both newer, less-seasoned companies as well as well-known, established companies in all market capitalizations, and normally holds equities of 40-60 companies.</p> <p>The Underlying Fund may use derivatives for efficient portfolio management ("EPM"), hedging or investment purposes.</p> | <p>Refer to "Investment Objective and Policies" in the Underlying Fund's Prospectus relating to the Underlying Fund for further Information on the investment strategy.</p> |

| KEY RISKS | |
| <p>WHAT ARE THE KEY RISKS OF THIS INVESTMENT?</p> <p>The value of investments and the income from them, and therefore the value of, and income from, Shares relating to the Underlying Fund can go down as well as up and you may not get back the amount you invest.</p> <p>These risk factors, among others, may cause you to lose some or all of your investment:</p> | <p>Refer to "Risks" of the Underlying Fund's Singapore Prospectus for further information on the risks of investing in the Sub-Fund.</p> |
| Market and Credit Risks | |
| <p>You are exposed to Country Risks in the US. Currency movements in the underlying investments of the Underlying Fund that is denominated in a currency different from that of the Underlying Fund itself may significantly affect the NAV of that Underlying Fund.</p> | |
| Liquidity Risks | |
| <p>You are exposed to liquidity risks of underlying fund's investment. | Product-Specific Risks | |
| <p>You are exposed to Derivatives Risks. The Underlying Fund will use financial derivative instruments for investment purposes and for the purpose of meeting its investment objective. The Underlying Fund 's investment in financial derivative instruments may involve additional risks, for example, counterparty default risk or insolvency risk, risk involved with effective management of derivative strategies, risk of mispricing or improper valuation of derivatives, risk of embedded leverage through investment in a derivative that is itself leveraged, risk of higher volatility, risk of illiquidity in the market for certain derivative strategies and risk of loss greater than the amount invested in the derivative, and may expose the fund to significant losses.</p> <p>You are exposed to Equity Securities Risks The value of underlying equity investments of the Underlying Fund may fluctuate in response to the activities and results of individual companies, or because of general market and economic conditions and changes in currency exchange rates.</p> <p>You are exposed to Focused Portfolio Risk. The Underlying Fund may invest in a limited number of issuers, industries or sectors or countries and may therefore be subject to greater volatility than a portfolio invested in a larger or more diverse array of securities. Such concentration could expose such investors to losses disproportionate to market movements in general if there are disproportionately greater adverse price movements in securities in which the Portfolio is invested.</p> <p>You are exposed to Turnover Risks. The Underlying Fund is an actively managed investment fund - a higher rate of portfolio turnover increases brokerage and other expenses, which must be borne by the Underlying Fund and its investors.</p> | |
