Product-Specific Risks	

You are exposed to concentration and sector risk.

As the Underlying Fund focuses its investments on certain markets or types of investment or sectors, such concentration does not allow the Underlying Fund the same scope of diversification of risks across different markets or types of investments or sectors as would be possible otherwise. Consequently, the Underlying Fund is particularly dependent on the development of such investments in the individual or related markets or sectors.

You are exposed to low interest rate consequence.

This risk is present in Underlying Fund having debt securities in its investment universe. A very low level of interest rates may affect the return on short term assets held by monetary funds which may not be sufficient to cover management and operating costs leading to there a structural decrease of the net asset value of the Underlying Fund.

You are exposed to counterparty risk.

This risk relates to the quality of the counterparty with which the management company negotiates, in particular involving payment for/delivery of financial instruments and the striking of agreements involving forward financial instruments. This risk is associated with the ability of the counterparty to fulfil its undertakings (for example: payment delivery and reimbursement). This risk also relates to efficient portfolio management techniques and instruments. If counterparty does not live up to its contractual obligations, it may affect investor returns.

You are exposed to derivative risk

The sub-fund aims to hedge and/or to leverage the yield of its position. Investors should be aware that leverage increases the volatility of the Underlying Fund.

Please refer to the Underlying Fund's Luxembourg Prospectus, Book I – Appendix 3 and page 88 for further information on the specific risks of the Sub-Fund.
