Product-Specific Risks	

- **You are exposed to concentration and sector risk in the materials sector**
 - As the Underlying Fund focuses its investments on certain markets or types of investment or sectors, such concentration does not allow the Underlying Fund the same scope of diversification of risks across different markets or types of investments or sectors as would be possible otherwise. Consequently, the Underlying Fund is particularly dependent on the development of such investments in the individual or related markets or sectors.
- **You are exposed to emerging markets risks**
 - Sub-funds investing in emerging markets are likely to be subject to a higher than average volatility due to a high degree of concentration, greater uncertainty because less information is available, there is less liquidity, or due to greater sensitivity to changes in market conditions (social, political and economic conditions). In addition, some emerging markets offer less security than the majority of international developed markets and certain markets are not currently considered to be regulated markets. For this reason, services for portfolio transactions, liquidation and conservation on behalf of funds invested in emerging markets may carry greater risk.
- **You are exposed to operational & custody risk**
 - Some markets are less regulated than most of the international markets; hence, the services related to custody and liquidation for the funds on such markets could be more risky. Operational risk is the risk of contract on financial markets, the risk of back office operations, custody of securities, as well as administrative problems that could cause a loss to the sub funds. This risk could also result from omissions and inefficient securities processing procedures, computer systems or human errors.
- **You are exposed to risk related to investments in some countries**
 - Investments in some countries (China, India, Indonesia, Japan, Saudi Arabia, Thailand) involve risks linked to restrictions imposed on foreign investors and counterparties, higher market volatility and the risk of lack of liquidity for some lines of the portfolio. Consequently, some shares may not be available to the Underlying Fund due to the number of foreign shareholders authorised or if the total investments permitted for foreign shareholders have been reached. In addition, the repatriation by foreign investors of their share of net profits, capital and dividends may be restricted or require the approval of the government. The Company will only invest if it considers that the restrictions are acceptable. However, no guarantee can be given that additional restrictions will not be imposed in future.
- **You are exposed to equity markets risk**
 - The risks associated with investments in equity (and similar instruments) include significant fluctuations in prices, negative information about the issuer or market and the subordination of a company's shares to its bonds. Moreover, these fluctuations are often amplified in the short term. The risk that one or more companies suffer a downturn or fail to grow can have a negative impact on the performance of the overall portfolio at a given time. There is no guarantee that investors will see an appreciation in value. The value of investments and the income they generate may go down as well as up and it is possible that investors will not recover their initial investment.

Please refer to the Underlying Fund's Luxembourg Prospectus, Book I – Appendix 3 and page 231 for further information on the specific risks of the Sub-Fund.
