KEY FEATURES OF THE SUB-FUND

WHAT ARE YOU INVESTING IN?

- You are investing in an ILP Sub-Fund that feeds 100% into the Underlying Fund, a UCITS compliant sub-fund constituted in Luxembourg that aims to provide you with returns through medium term capital growth by investing in a limited number of bonds, debt securities or other securities issued by emerging countries (defined as non OECD countries prior to 1 January 1994 together with Turkey) and/or by companies doing business in these countries.

Please refer to the Underlying Fund’s Luxembourg Prospectus, Book I, page 15 for further information on the SICAV and page 21 for further information on the Sub-Fund share classes.

Investment Strategy

- The Underlying Fund invests in high quality money market instruments, term deposits and other short term fixed income securities denominated in USD. The Management Company performs its own documented assessment of the credit quality of money market instruments that allows it to consider a money market instrument as high quality.
- The Underlying Fund can hold cash on an ancillary basis and, within a limit of 10% of the assets, in UCITS or UCIS provided that underlying investment schemes qualify as short term money market funds or money market funds.

Please refer to the Underlying Fund’s Luxembourg Prospectus, Book II, Page 256 for further information on the Sub-Fund.

¹ For ILP sub-funds that feed 100% into an underlying CIS fund, some of the information provided below could be similar to the underlying CIS fund.

Market and Credit Risks	
<ul style="list-style-type: none"> • You are exposed to market risks <ul style="list-style-type: none"> o Your investment may go up or down due to changing economic, political or market conditions that impact the prices of the bonds or other securities that the Underlying Fund invests in. • You are exposed to credit risks <ul style="list-style-type: none"> o Your investment may go down due to a rating downgrade of a bond issuer to which the Underlying Fund is exposed. Such risk relates to the ability of an issuer to honour its debts. Downgrades of an issue or an issuer rating may lead to a drop in the value of bonds in which the Underlying Fund has invested. • You are exposed to inflation risk <ul style="list-style-type: none"> o Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment’s purchasing power. • You are exposed to interest rate risk <ul style="list-style-type: none"> o The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc. Investors should note the fact that an increase in interest rates results in a decrease in the value of investments in bonds and debt instruments. • You are exposed to taxation risk <ul style="list-style-type: none"> o The value of an investment may be affected by the application of tax laws in various countries, including withholding tax, changes in government, economic or monetary policy in the countries concerned. If the currency in which a security is denominated appreciates in relation to the reference currency of the Underlying fund, the exchange value of the security in the reference currency will appreciate; conversely, a depreciation of the denomination currency will lead to a depreciation in the exchange value of the security. When the 	

manager is willing to hedge the currency exchange risk of a transaction, there is no guarantee that such operation will be completely effective.

Liquidity Risks

- You are exposed to liquidity risks**

The ILP Sub-Fund is not listed and you can redeem only on Business Days.
There is no secondary market for the ILP Sub-Fund. All realisation requests should be to Aviva Ltd.

Product-Specific Risks

- You are exposed to concentration and sector risk**

As the Underlying Fund focuses its investments on certain markets or types of investment or sectors, such concentration does not allow the Underlying Fund the same scope of diversification of risks across different markets or types of investments or sectors as would be possible otherwise. Consequently, the Underlying Fund is particularly dependent on the development of such investments in the individual or related markets or sectors.

- You are exposed to low interest rate consequence**

This risk is present in Underlying Fund having debt securities in its investment universe. A very low level of interest rates may affect the return on short term assets held by monetary funds which may not be sufficient to cover management and operating costs leading to there a structural decrease of the net asset value of the Underlying fund.
